10.	If you mean that Caption and Enter here are not vertically aligned, despite using the suggested 'vertical-align: middle;' you may have to look into giving the columns a specific or minimum width. I am suspecting that the elements may not be perfectly positioned visually next to each other on the 'reading' level, due to the columns adjusting with top/bottom padding in order to maintain vertical alignment. Therefore being strict about the width of your columns may help.	100 Std.	€25.75	<b>€2,575.00</b>
